

1. TRIAL INTRODUCTORY FLIGHT (TIF)

The first step in your aviation journey. Take a ride in our **light sport aircraft** with one of our professional instructors and get your first hands-on experience piloting a plane.

2. INITIAL FLIGHT LESSONS

Now we delve into the basics of flight as we work through your first few modules of the RPC syllabus, both in the air and on the ground. Lessons include: Effects of controls, climbing & descending, stalls and circuits.

3. FIRST SOLO FLIGHT

With your flying skills now starting to develop and your understanding of aviation theory becoming more sound, it's time for a huge milestone - your first solo flight!

4. AREA SOLO FLIGHT

By now you've spent some solo time in the cockpit and learned a few advanced skills. Now it's time to spread your wings and head out on a solo area flight. You'll go beyond the airport circuit and gain valuable experience navigating the skies.

5. THEORY EXAM

You've worked your way through the syllabus and are now ready to put your knowledge into practice by tackling the theory exam.

6. PRACTICE FLIGHT TEST

With your theory exam now behind you, the focus turns to accomplishing your final goal - the flight test. Your instructor will work closely with you to tie all of your new-found piloting skills together and simulate your flight test. This is a great opportunity to polish your skills and mentally prepare for the real thing.

7. FLIGHT TEST

Your final challenge to becoming a pilot! The flight test will assess your understanding of the course and your competency as an aviator. Don't stress too much however, your instructor will ensure you are very well prepared for this final milestone.

8. YOU ARE NOW A PILOT

Congratulations! Your hard work has paid off. You can now fly as Pilot in Command. With one challenge conquered, it's time to think about what's next in your aviation journey...

GROUND THEORY

Developing a sound knowledge of the necessary theory required to achieve your RPC is an important part of your aviation journey.

Each module of the flight training syllabus is supplemented by an instructor-led ground theory component.

Beyond this, it is encouraged that students be proactive and engage in their own self-directed theory studies. Extra instructor-led theory classes are also available.

It is always beneficial to be ahead with your theory studies and confident of the course concepts so you can focus on your flying.

Aerohunter can provide Student Starter Packs with all of the necessary learning materials (textbooks, logbooks, etc.)
